RE: Anne Parker

To whom it may concern:

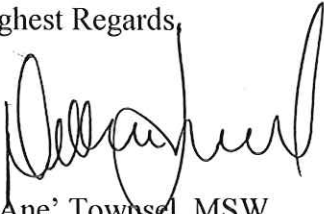

It is with great honor that I present a letter of recommendation on behalf of Ms. Anne Parker. I had the privilege of working with Ms. Parker for a community outreach event in April, 2015. The goals and aims of this event were to educate community members about cancer genetics and available research in our community. As the Community Health Educator, I look for unique opportunities to educate individuals about cancer prevention, age appropriate screening and research opportunities. Ms. Parker was able to provide our guests with information about her personal journey and how to advance clinical research.

Attendees traveled from all over Michigan to hear Anne Parker speak and everyone present was affected by the presentation that she gave. Various support groups, departments and community members continue to share the successes of the program and how Ms. Parker's presentation influenced their community members. Personally, I found this program to be one of our most successful outreach events. It was not only educational but it was also an evening of sharing, laughing and encouraging our attendees to partner with local and national research institutes in an effort to advance cancer research. Ms. Parker's speech appealed to the physicians, researchers, support groups, and community members that were present.

It was an honor to work with someone who was caring, compassionate and extremely knowledgeable. Anne Parker was able to give a speech based on our vision for the program. At Beaumont we seek opportunities to engage community members as an integral part of research. We were so grateful to host this event with Anne Parker as our guest of honor. The evening proved to be a great way to showcase local research findings and ways that the community may become a part of existing research. Should you decide to bring Anne Parker as a speaker or a guest you will not be disappointed. Her testimony may bring tears but it will also inspire and ignite change for future generations. Your attendees will be empowered because Ms. Parker will share concrete ways of advancing future research.

Please feel free to contact me if I can be of further assistance. My contact information is listed below for your convenience.

Highest Regards,
